App Pitch & Prototyping

In this challenge, your task is to come up with an app idea, design the backend with FastAPI, and define the API endpoints needed to power the backend. Each team will pitch their app and API design in Shark Tank style, sharing their demo code and API structure.

Key Objectives

- Design and build the backend API for your app using FastAPI.

- Define clear API endpoints and models that power your app's functionality.

- Document and share your demo code with proper comments and instructions.

- Present your app idea and API design in a pitch format.
